

CVM Manuscript Source File Checklist

- ✓ The correct CVM LaTeX style files and CVM bibstyle file are used.
- ✓ All figures are large enough to show clearly, without zooming in, all important details.
- ✓ All text in figures is at least as large as the main body text of the paper.
- ✓ All text in tables is at least as large as the main body text of the paper. In particular, `resizebox` must not be used to shrink tables as this also reduces the size of the text.
- ✓ Proper `\section`, `\subsection` and `\subsubsection` headings are used, and do not invent your own approach to headings by means of bold text, newlines, etc., at the start of a paragraph.
- ✓ All substantive text is within a section, or subsection, etc., and do not have lengthy text before the first item in a section, subsection, etc.
- ✓ Statements of the form "this work will be made available online" have been replaced by an actual URL where the work can be found, e.g., "our programs and data are available at `\url{http://www.example.com/git/mywork.html}`".
- ✓ Check the tex log for errors and fix them.
- ✓ All equations (and other items) have been laid out so they fit in the width of the text.
- ✓ All details, including page number, year, etc., are included in all references.
- ✓ All references to arXiv should be replaced to references to journal publications if the work has already been published.
- ✓ Check the bibtext log for errors, and fix them.

Please check each of the items in the list above, and the manuscript will be returned for further adjustment before it can be published if any of the above are not correctly followed.
